The City of Belleville has initiated the development of a Transportation Master Plan with a twenty-year horizon. This will be an important document, guiding the strategic directions of the transportation network as Belleville accommodates mobility for future growth while ensuring a sustainable, accessible, and highly liveable community.

The study will examine deficiencies and develop recommendations for the transportation network, including pedestrian, cycling and vehicular modes. Recommendations arising from the study will guide the establishment of infrastructure improvement priorities and support the development of the City’s Capital Construction Plan.

The study will be undertaken in accordance with the Municipal Class Environmental Assessment (EA) Process, which is an approved process under the Environmental Assessment Act. Public consultation is a key component of the study. Once the dates and locations for the meetings are set, public notices will be posted. A link to the project website can be found on the homepage of The City of Belleville’s website (http://www.city.belleville.on.ca). The project website will be updated frequently to provide information on the current status of the study.

For further information on the project or to submit comments, please contact:
