THE PROJECT

The Contract to complete the rehabilitation of the bridge crossing Moira Street West near the Avonlough Road and Moira Street West Intersection will begin the start of June, 2014 with an anticipated end of construction September, 2014. During the construction phase of this project commuters on Moira Street West will be confronted with lane reductions and intersection delays. Temporary Traffic Signals have been installed at the intersection of Avonlough Road and Moira Street West to help maintain traffic control through the construction site and also maintain a safe work area. Your understanding and co-operation during this project is greatly appreciated.

THE OUTCOME

Once the rehabilitation of the bridge has been completed the residents and commuters will enjoy a bridge that has been rehabilitated to an approved design standard that will accommodate the needs of the City of Belleville for years to come.
